

JZR GOLD INC.

Generating Near-Term Cash Flow
from high-grade gold bulk sample

Investment Highlights

Advancing towards near-term cash flow from bulk gold sample at flagship Vila Nova Gold Project in Brazil targeted for September 2022, with revenue expected as early as November 2022

All necessary permits in place to bulk sample up to 600,000 tonnes per year

An estimated 9 million tonnes of gold tailings have been identified with grades averaging 2.7 g/t for a projected contained gold content of over 700,000 ounces (oz)

Exploration upside from tailings expansion and hard rock drilling

About the

Vila Nova Gold Project

JZR Gold Inc. is advancing the Vila Nova Gold project, located in the state of Amapá, Brazil, towards a bulk sample targeted for September 2022. Core drilling, sampling and trenching of tailings is ongoing with 1400 metres completed to date by JZR Golds' operating partner, Eco Mining.

Assay results estimate 9 million tonnes of gold tailings with grades averaging 2.7g/t for projected contained gold content of over 700,000 ounces (oz).

- There are 9 tailing areas sampled with widely spaced auger tests ranging from 4-12 metres depth.
- There is mineable resource equivalent to 25 tons of gold.

Near term cash-flow from bulk sample targeted for Fall 2022 with revenue expected as early as November 2022.

Vila Nova hosts 9 million tonnes of tailings and Jazz Resources Inc envisions an 800 tonne per day mill. Significant revenues are expected beginning as early as Fall 2022 with cost per ounce of ~US\$500 and net gold revenues being split between partners.
